**Submission Content/Notes :** In the article in this morning's Washington Post (Saturday, Oct. 18th), it appeared that one thing people were concerned about was the "squeal" of metal train wheels turning.

I was wondering if anyone had thought of having the light rail run on hard rubber wheels (like some lines of the Paris Metro).

Having the trains run on rubber wheels would remove the "squeal" and also, I suspect, reduce friction, reducing other noise (rumbling) as well as wear-and-tear on the trains themselves (reducing upkeep costs).

Just a thought.

**Submission Content/Notes :** I would like to voice my support for the purple line, as a LRT. Adding buses to already crowded streets will do nothing to relieve the congestion in Silver Spring and Bethesda. The 5 mile drive to bethesda can take me up to 25 minutes, and thats on the weekend! Taking the bus when it is already that slow by car is just not feasible. I know that the purple line would keep my car off the road for my weekly trips to bethesda, and that is only the beginning.

As far as good light rail systems, i would suggest looking at Minneapolis/St Paul.

**Submission Content/Notes :** Re: Purple Line DEIS -- No Rail on the Trail!

Dear Governor O'Malley,

MTA Planning Director Ratcliff

County Executive Leggett,

Chairman Hanson,

Council President Andrews,

We live in Chevy Chase just a few blocks from Rock Creek Park and the Capital Crescent Trail. We use the trail often for walking, cycling, and dog walks. It is a wonderful resource for our community and is used by many people from all over the county.

Every week, more than 10,000 hikers and bikers -- of all ages, races, ethnicities, and abilities -- use the Capital Crescent Trail between Bethesda and Silver Spring. The Trail is enjoyed by the elderly, parents pushing strollers, bird watchers, families with small children, casual cyclists, teens going to and from school, athletes in training, and daily commuters. Trail users come from all around the region. .

The Trail is revered for its tranquility and natural beauty. If the Purple Line is built here, all of the mature trees surrounding the Trail would be permanently removed, and trains or buses would pass about 10' from hikers and bikers every three minutes. It would be neither safe nor attractive for Trail users to be passing each other on a narrow bike lane - about 10' from trains or buses. It would be an environmental and recreational disaster.

Great urban areas have great parks. This irreplaceable forest and continuous natural Trail provide rare and outstanding recreational opportunities that cannot be replicated anywhere else.

Please use your wisdom, vision and courage to put transit elsewhere and to preserve the Capital Crescent Trail as this region's "Central Park" -- so that we, and generations to come, will be able to enjoy this natural resource, regardless of the growth and development that takes place around us.

Thank you for your consideration.

Sincerely,

|                              |

**Submission Content/Notes :** I know the Purple line is hotly contested. It seems that the light rail is something people are considering. If that is the case then the infrastructure cost is such that this is considered to be a solution for the next 100 years. With such a horizon of use it is short sighted not to go below ground in non industrial areas. This would have less impact on the current bikers and hikers and walkers using the path for commuting, exercise and pleasure. The maintenance cost would be greatly reduced over the long haul, traffic less effected and the public less impacted. If the thought that more would ride a light rail then build it for the future not like we built for the 1800's

**Submission Content/Notes :** Adding the purple line to the district's Metro is a good idea. Many employees of Walter Reed Army Medical Center take the Red Line to work every morning. Soon Walter Reed employees will move to Bethesda Naval Hospital. For employees residing in Silver Spring and surrounding areas it makes more sense to drive to Bethesda than take the Red Line to save time. The construction of the purple line and having a shorter connection from Silver Spring to Bethesda will be an incentive for employees to travel to their new workplace.

## THE PURPLE LINE...AN EXTRAVAGANCE WE CAN'T AFFORD IN THESE DIFFICULT ECONOMIC TIMES

**1. IT DOESN'T SOLVE THE MAIN PROBLEM OF TRAFFIC CONGESTION, AND MAY DELAY OTHER SOLUTIONS THAT WOULD.** The Purple Line light rail system doesn't even address the major transportation problem in the Montgomery/ Prince George's area: traffic congestion.

- Studies show, and the State's project manager confirms, the Purple Line is **not intended to reduce traffic congestion**—80% of its riders will come from another form of mass transit, not from cars. **Why would we build a new system that doesn't begin to address our biggest transportation problem?**
- Because the Purple Line will be competing for funds, it is likely to push back the Corridor Cities Transit-way (CCT) that would provide much-needed relief for I-270 congestion. The CCT would serve an area with no public transit and that is expected to grow by some 725,000 in next decade. Thus, **a project that actually could reduce traffic congestion will be delayed** while we build a new system for those already using transit.

**2. IT'S NOT COST-EFFECTIVE.**

- Light rail is the **most expensive mode** per passenger carried.
- According to state figures, the Purple Line will actually serve approximately 6800 new riders. With a total price tag in the range of \$1.8 billion (in 2007 dollars!) that means the **system will cost \$265,000.00 per new rider.**

**3. IT'S OBSOLETE BEFORE IT STARTS RUNNING.**

- **Plans for the Purple Line are already out of date** - they were developed before plans were set for BRAC.
- The planned relocation of the Walter Reed Army Medical Center to the National Naval Medical Center in Bethesda in 2011 is projected to generate an estimated **900,000 new car trips per year, but this area will not be served by the Purple Line.**

**4. IT'S NOT AS ENVIRONMENTALLY-FRIENDLY AS HAS BEEN REPRESENTED.**

- As the Purple Line is not projected to dramatically reduce the number of cars on the road, **it will not significantly reduce vehicle pollution** or improve air quality as originally believed.
- The Purple Line will be built over what is now largely residential and recreational green space, reducing public access to some of the last open space in Montgomery and Prince George's Counties and requiring the **destruction of a minimum of 1000 mature trees.**

- The rail line will have a **major impact on the Capital Crescent Trail**, used by an estimated 10,000 individuals per week. In places the trail is only 33 feet wide and there is no way that walkers, hikers, joggers and cyclists can safely coexist unless the path is widened, requiring the taking of additional land from adjacent green space and existing properties.
- Though the state suggests that the Purple Line and trail users can happily co-exist, the construction phase of the line will actually destroy much of the trail as it is currently configured. And, contrary to popular belief, **funds/plans to re-build are not in the Purple Line project budget but would be the responsibility of Montgomery County**

## 5. THE PURPLE LINE WILL SEVERELY IMPACT NEIGHBORHOODS ALONG ITS ROUTE

- Serious safety concerns are raised by **high-speed trains traveling on residential streets** alongside homes and yards, adjacent to schoolyards and pedestrian areas.
- According to the DEIS, **neighborhoods along the route will be severely impacted:**
  - 64 intersections along the route will need improvements, such as new turn lanes, **to prevent traffic from worsening** where vehicles will share travel lanes with light rail trains or express buses.
  - As many as **four Montgomery County Schools will lose tracts of land** to the line.
  - Sound walls and panels covering train wheels would be necessary to protect residents in up to **18 "potential annoyance zones" from the screech of metal** train wheels turning sharp corners. Without such protections, noise levels could be severe for residents.

## 6. IT'S FAR FROM CLEAR THAT THE PURPLE LINE IS THE SMARTEST WAY TO SPEND LIMITED TRANSIT DOLLARS

- The Town of Chevy Chase commissioned an independent study which **found alternatives (including Jones Bridge) are cheaper, faster, and more effective in getting people out of cars.**
- By looking at best practices in other communities, it seems clear there are alternatives that can effectively move more people at a lower cost per rider and with less impact on green space and existing residential neighborhoods.

## 7. HOW WILL WE PAY FOR IT?

- Less expensive and more efficient alternatives such as the Jones Bridge are more likely to achieve federal funding.
- In the October 18, 2008 *Washington Post*, **State officials admitted they will have trouble paying for the Purple Line.**
- According to the state, its measure for cost-effectiveness -- a key consideration for securing critical federal money -- **barely meets federal eligibility standards.** (Washington Post, October 18)

**Submission Content/Notes :** To: Governor O'Malley and Diane Ratcliff, Director of Planning, MTA-MD

My wife and I strongly urge you to support construction of the Purple Line light rail transit project to serve Prince Georges' and Montgomery Counties and the Washington Metro region. We believe it is the best option to help us meet our future transportation challenges.

We face these dire threats:

- our damaging reliance on foreign oil pollutes and degrades the environment and weakens our economy, and hence, our national security;
- the inherent wastefulness of our automotive culture and;
- the dangerous and accelerating adverse impacts of Global Warming caused by our overconsumption of fossil fuels.

We need to vastly improve the energy efficiency our nation's transportation system. Starting in the Wash DC metro area, this means we must commit to greater use of mass transit, and to do so, we need to develop our mass transit systems.

Building the Purple Line will reduce overall pollution and better serve the environment, reduce our dependency on foreign oil, invest in and increase the productivity of our national and regional economy, and ultimately help us improve our national security.

If we are to escape the inherent wastefulness of our automotive culture, we need the mass transit alternatives to enable us to do so.

If we are to take the problems of Global Warming seriously - - we need to do something constructive about it - - then let us begin here with approval of the Purple Line project.

In terms of a more localized perspective, I strongly urge adoption of the Purple Line as a High Investment Light Rail Transit project.

Such a choice would operate with a lower annual increase in operating subsidies and lower annual O&M costs than other light rail options, attract the most ridership and thereby lessen automotive traffic, and provide riders with the best service. This option will optimize our public investment.

As for the "not in my backyard" syndrome, it's understandable, and for some lamentable. I'm sorry, I've been "built up on" too, and I understand those concerns.

But we must serve the public objective to do the greatest good for the greatest number.

The NIMBYism of the Chevy Chase golf club, however, I can not support. The public Right of Way exists to serve the public good, not for your golf game and country club pursuits. With the Purple Line, you will continue to enjoy those things, and you can afford to sacrifice just a little for everyone else. (With a slightly smaller golf course, you may find your golf scores actually improve.)

I fully support the Purple Line design that would retain and widen the existing Capital Crescent bike trail, and interconnect with an improved network of bike routes.

I also fully support a Purple Line design that enhances pedestrian safety and encourages walking as a growing form of public transit.

As for Silver Spring, most folks support mass transit and the Purple Line. But there will be some adverse impacts to our neighborhoods if the Medium Investment light rail option is selected with a route through downtown and Wayne Avenue.

If that option is selected, I urge you to adopt the best pedestrian and bicycle safety measures and improvements into the Purple Line design.

And I urge you to go further to incorporate these additional mitigation features into the design:

1. Rehabilitation of the recreational track at Sligo Creek Elementary school with an all weather, padded surface.
2. Rehabilitation of the athletic field at Sligo Creek Elementary school by installing durable, artificial turf.
3. Systematically improve bike lanes and surfaces in the area.

We need to look beyond mass transit and encourage walking, running, and biking as part of the Purple Line solution. And I believe we can come up with cost sharing strategies to accomplish them:

- By fixing the track, we will provide citizens with a vital, accessible, and safe resource for their walking and running exercise.
- By fixing the athletic field, we will encourage soccer as a "carry over" sport for all ages by providing a safe, accessible, and durable resource.
- By improving the bike lanes and surfaces, we will increase bike commuting use.

All these mitigation features will enhance the community and yield long term benefits by bolstering alternative transit strategies to the culture of the automobile. And people from the community can be joined there by people using the Purple Line.

To conclude, the Purple Line will connect diverse communities throughout its length, provide cultural and economic opportunities for the people, and bring us together in a way that helps both the region and the planet.

Thank you.

Submission Content/Notes : Dear Governor O'Malley, MTA Planning Director Ratcliff, County Executive Leggett, Chairman Hanson, Council President Andrews,

Every week, more than 10,000 hikers and bikers -- of all ages, races, ethnicities, and abilities -- use the Capital Crescent Trail between Bethesda and Silver Spring. The Trail is enjoyed by the elderly, parents pushing strollers, bird watchers, families with small children, casual cyclists, teens going to and from school, athletes in training, and daily commuters. Trail users come from all around the region.

The Trail is revered for its tranquility and natural beauty. If the Purple Line is built here, all of the mature trees surrounding the Trail would be permanently removed, and trains or buses would pass about 10' from hikers and bikers every three minutes. It would be neither safe nor attractive for Trail users to be passing each other on a narrow bike lane - about 10' from trains or buses. It would be an environmental and recreational disaster.

Great urban areas have great parks. This irreplaceable forest and continuous natural Trail provide rare and outstanding recreational opportunities that cannot be replicated anywhere else.

Please use your wisdom, vision and courage to put transit elsewhere and to preserve the Capital Crescent Trail as this region's "Central Park" -- so that we, and generations to come, will be able to enjoy this natural resource, regardless of the growth and development that takes place around us.

Thank you for your consideration.

Sincerely,

A Capital Crescent Trail fan

The purple line just makes sense. It will allow prompt and inexpensive public transport between the Maryland suburbs around DC. It will also relieve traffic congestion at UMD and Rte 1. Because it avoids busing from the Green Line a mile away and open up quick public transit to many in the area west and southeast of College Park, the general student welfare will improve for all who don't happen to live on campus. Plus it provides a quick public transit route where one now must drive on the congested Beltway.

**Attachments :** Comment Cards. CJ Brown\_PL just makes sense.pdf (143 kb)

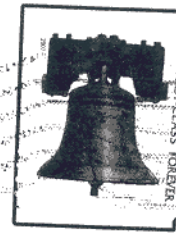

**I enthusiastically support this vision of a Purple Line:**

1. A generally at-grade light rail line that is primarily on its own right of way;
2. Excellent service linking Bethesda, Silver Spring, College Park & New Carrollton Metro Stations with stops in Chevy Chase, Long Branch, Langley Park, University of MD, Riverdale Park & other communities;
3. Completion of the Capital Crescent hiker-biker trail alongside the transit line on the Georgetown Branch railroad right of way between Bethesda & Silver Spring, and pedestrian upgrades elsewhere in Prince George's and Montgomery Counties;
4. A community and environmentally-friendly design that mitigates negative impacts in a cost-effective manner without impeding speedy implementation of the project.

I Support the Purple Line Because....

Bethesda Silver Spring Long Branch Takoma/Langley College Park New Carrollton

**Purple Line** **Greener Future**

Use the space below to describe why you support the Purple Line.

- Our area is fast approaching gridlock and the Purple Line will do a lot to alleviate it. We can't wait to increase our public transportation.
- The Purple Line, as currently laid out, would take quite a few cars off the DC Beltway.

- 1) This Metro Line is overdue. The State and County Administration should give priority to public transportation.
- 2) It saves time to go to College Park (example) and reduces the chance to get back problems --- improves health status.
- 3) Reserve allocation in this respect will create more job in the public sector of course metro administration and maintenance capacity should be improved.

Please call me if you have any questions.

Why Purple line?

Because it shouldn't take an hour to get from Bethesda to Silver Spring.

Because it will alleviate Beltway traffic.

Because mass transit is the responsible thing to do.

Better route for commuting from New Carrollton to Bethesda. Better route from Silver Spring to Bethesda! More employment opportunities.

**Attachments :** Annon Card\_Better Route.pdf (101 kb)

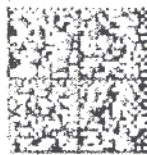

**I enthusiastically support this vision of a Purple Line:**

1. A generally at-grade light rail line that is private on its own right of way;
2. Excellent service linking Bethesda, Silver Spring, College Park & New Carrollton Metro Station stops in Chevy Chase, Long Branch, Langley, University of MD, Riverdale Park & other communities;
3. Completion of the Capital Crescent hiker-biker trail alongside the transit line on the Georgetown Branch railroad right of way between Bethesda & Silver Spring, and pedestrian upgrades elsewhere in Prince George's and Montgomery Counties;
4. A community and environmentally-friendly design that mitigates negative impacts in a cost-effective manner without impeding speedy implementation of the project.

**Submission Content/Notes :** To Whom It May Concern,  
The purple line is a necessary public transportation line for people commuting along the northern reaches of the metro system. I also support running the purple line underground through the most congested part of Silver Spring. Although it may cost a good deal of money up front, the money saved over the long run in terms of decreased traffic congestion and decreased pollution will benefit the involved communities immensely. It is abhorrent to me to think that the interests of a county club can override the needs of so many people who would be helped by the purple line. Please consider carefully the benefits of the purple line and support its development.  
Thank you,  
A Concerned Resident

**Submission Content/Notes :** I went to University of Maryland and would have loved to have the planned purple line in when I was there. There are so many great places to go around Washington, but it's a pain to have to go into the middle to transfer and go back out. I am also extremely interested in the project lengthening the Capital Crescent Trail. We would take the metro to the beginning and ride into Alexandria with the Trail Club at U of M on a regular basis.  
Also, I now live in Salt Lake City, and the light rail we have is wonderful. All the students take it into the University here, which opens up more places for students to live. People take it from thier suburban homes into the city, so parking is hardly ever a problem. Salt Lake is even planning on building a new Trax line. It's great!!!

**Submission Content/Notes :** Has MTA considered the implications such as weather affects on the rail (snow, ice, and fallen trees), inflexible routes, and collisions with cars?

There are also the impacts of the overhead lines and rails on the neighborhood. Rail lines have historically determined social and political boundaries. So hopefully someone as considered this for everybody's benefit and not just the majority.

In general, it's a little disappointing that the decision was for the light rail option and I suspect that the majority who do support the light rail do not ride buses and use public transportation as their main mode of travel. Most buses and their drivers are usually timely, safe, clean, and flexible in schedule changes. And recently Metro buses ability to quickly mobilise to accommodate the surge in patronage due to yesterday's train derailment is evidence of the strength of having a Bus Line over a LRS.

Essentially, at the end of the day the questions are: what happens if the LRS gets derailed or somehow breaks down? What happens if MTA needs to expand the LRS system? How will the carbon footprint of the permanent infrastructure be mitigated?

I'm just curious as to if the above items have been considered.

**Submission Content/Notes :** I have not disclosed my' information here, but the correct e-mail is provided below. My question is that any transport service has not yet considered the "29 route", and your project doesnt cover it. if you may start any transport from Silverspring to Colombia, via Burtonsville and Scaggsville from Morning to evening, you will be the only transport service in this route. if you study Commuter 915 & 929, they are not available in the morning from Silver Spring to Columbia and from Columbia to Silver Spring in the evening, instead, they do in the other way ( from Columbia to DC in the morning and Dc to Colombia in the evening).pls get back to me by email.

**Submission Content/Notes :** It's a question, please - I live along the Wayne Avenue stretch of the Purple Line. Question: Will the Purple Line trains REALLY be the nice sleek quiet ones that are shown on the homepage of the PurpleLineMD site? And NOT the large ancient heavy trains that are called "Light Rail" in Baltimore? I have seen fabulous, fabulous light rail systems at work in, e.g., Strasbourg France, and Dublin Ireland. The trains are MODERN, not the horrendous dirty noisy heavy trains that you have in Baltimore. So please, sir, my question is: Are you truly going to give us the nice inoffensive actually terrific MODERN trains that show on the Purple Line home page?  
This is a really serious question. And I truly thank you for giving it some attention.

**Submission Content/Notes :** I live in North Bethesda and thus do not have "ruin my neighborhood" concerns many other MoCo areas have. However, i do understand their concern, as it is true metro increases property values but if the greenline is any example it also increases crime. What i do not understand is my spend billions when you could simply improve the bus system? It would not affect the enviroment and would also be cheaper for both counties in hard economic times.

**Submission Content/Notes :** Take the long-term view and run the purple line like most of Metro in a tunnel. It would be more expensive in the short run, but visionary for long-term development, infrastructure, etc. and would avoid most of the debate about impacting the Capital Crescent trail. Considering all the money that is being spent lately by the federal government, this would be a worthwhile public works investment! Imagine where Manhattan would be if it relied only on surface transportation. Don't squander the opportunity to do it right the first time. Tunneling needs to be put on the table regardless of the cost.

**Submission Content/Notes :** Dear Governor O'Malley,  
MTA Planning Director Ratcliff,  
County Executive Leggett,  
Chairman Hanson,  
Council President Andrews

I live in East Bethesda and use the Trail on a daily basis for family walks to downtown Bethesda, for jogging, running and just walks to clear my mind.

This trail makes Bethesda a unique place to live and visit because of the green corridor and the quality of life it provides.

The Trail was the main reason I chose to buy a property in this particular neighborhood. If the Trail is replaced by a light transit rail, I will most likely move from the area. It is also predictable that the immediate presence of the train will lead to a drop in the market value of adjacent properties.

I am not alone in my strong support for the Trail. Every week, more than 10,000 hikers and bikers -- of all ages, races, ethnicities, and abilities -- use the Capital Crescent Trail between Bethesda and Silver Spring. The Trail is enjoyed by the elderly, parents pushing strollers, bird watchers, families with small children, casual cyclists, teens going to and from school, athletes in training, and daily commuters. Trail users come from all around the region.

The Trail is revered for its tranquility, safety, and natural beauty.

And yet, the recent Purple Line Environmental Impact Statement confirms that the Purple Line between Bethesda and Silver Spring will:

Permanently remove all the surrounding trees and tree canopy -- 17 acres of trees

Convert our Trail into a dangerously narrow bike lane along a transitway  
Run trains about 10' from trail users -- passing every three minutes in both directions

Permanently close the Tunnel for trail use or put the trail above the trains in the Tunnel

Park trains next to Giffords Ice Cream and Landmark Theater while awaiting maintenance

Great urban areas have great parks. This irreplaceable forest and continuous natural Trail provide rare and outstanding recreational opportunities that cannot be replicated anywhere else. Please use your wisdom, vision and courage to put transit elsewhere and to preserve the Capital Crescent Trail as this region's "Central Park" -- so that we, and generations to come, will be able to enjoy this natural resource, regardless of the growth and development that takes place around us.

Thank you for your consideration.

Sincerely,

Your Name and Address

**Submission Content/Notes :** I live on Farmington Court and use the Crescent Trail regularly. I am against the Purple Line following the Crescent Trail, as it will destroy our local environment. Your study is so flawed you should be ashamed of your selves!

**Submission Content/Notes :** I am writing in opposition to the Purple Line. Instead of investing in this, when the county is in financial trouble, lets update the existing services that already travel on the E/W route. The planned route through the walking trail to Bethesda is bizarre. People are using the best alternative to cars on that trail already i.e. walking or biking! Another grave concern is the increase in crime that will accompany the building of the Purple Line. We are already experiencing an increase in crime in the neighborhood communities off of East West Highway near Silver Spring, and this will surely make it worse. For a real life example, look to Baltimore County where crime has increased significantly in suburban shopping areas since metro has expanded from the city into the county.

**Submission Content/Notes :** I believe that the Purple Line is vitally needed. Just a glance at the metro map shows that all of the lines are radial; there are no circumferential lines. Much, if not most, of the metro riders ultimately want to travel circumferentially. The utility of the mass transportation would be vastly improved if this option were offered.
